SP STRIP CURTAIN SYSTEM

THE FLEXIBLE RESPONSE TO ROBUST REQUIREMENTS

Stricker

Torsysteme

WE STAND FOR:

- professional consultation
- high-performance and innovative products
- individual solutions
- high quality and durable materials
- on-time delivery
- reliable assembly and maintenance

WE WOULD BE HAPPY TO ADVISE YOU

Our staff is at your disposal at all times for your individual questions and projects.

A QUICK WAY TO CREATE INDIVIDUAL SPACES

Cost-efficient, flexible and quickly adaptable: The SP strip curtain system combines many advantages, and allows you to separate a wide range of areas from each other. It is inexpensive, durable, largely maintenance-free and easy to install – offering a cost-effective alternative to conventional door and gate systems. Optimised insulating performance helps you to cut your long-term operating costs, while

reducing illness-related absences caused by draughts and cold. A range of pre-assembled and customised configurations ensures maximum flexibility. Our strip curtains perform in all manner of situations: in offices, on industrial premises, in transit areas or wherever maximum low/high-temperature separation is required.

For further information on our strip curtain systems, along with details of all our products, please visit www.stricker.ms/en/torsysteme/strip_curtain_systems

SP STRIP CURTAIN SYSTEM

The flexible way to separate different areas

When it comes to the quick and simple separation of large spaces, our medium/heavy-duty strip curtain with bearing-mounted suspension system offers maximum flexibility. It is ideal for anywhere with heights up to 6,000 mm.

Our system is particularly good at delimiting areas with a high throughput of people on foot or mobile machinery traffic. It also offers visual and spatial separation, with protection from dust, water spray, draughts, fumes, smoke, noise and other environmental disturbance. Our strip curtain is available in both fixed and movable configurations, depending on your needs and type of installation. Flexible and user-friendly, it can be installed straight out of the box. It is also reliable, robust, rust-free and recyclable.

Design and construction

- Available in either galvanised or stainless steel
- Supplied in fixed or movable configuration
- Pre-drilled fixing plates ensure easy installation

Strip material

- Flexible, transparent PVC strips
- Available dimensions: 300 x 3 mm and 400 x 4 mm
- Temperature-range options from 0 °C to 50 °C or from 0 °C to -20 °C
- Flexible material with rounded edges for easy access
- Available to order in red/transparent version

Hangers

- Bearing-mounted suspension reduces wear
- Maintenance-free hangers made of hard plastic

ADVANTAGES

The cost-efficient alternative to conventional door systems

Customised adaptation to individual mounting configurations

Easy self-installation, thanks to the use of pre-assembled components; the Stricker installation service is also available if required

Maintenance-free and durable

Insulating performance has a positive influence on employees' health and operating costs

Individual strips can be replaced as required

Fast delivery of replacement strips and rolls for cutting to length

RANGE OF APPLICATIONS

Separation of buildings, indoor spaces, rooms and working areas, as well as storage facilities

Delimitation of areas with pedestrian or forklift-truck traffic

Machine enclosures

Thermal separation

Weather protection

FIXED SYSTEM

The particularly cost-effective, space-saving solution

Our fixed strip curtain system is particularly suitable for areas that need to be separated for visual, thermal, or purely practical reasons. The Stricker fixed strip curtain system offers a cost-effective and flexible alternative to conventional door and gate configurations. It is also space-saving, as only the individual strips – as opposed to the entire mechanism – need to be pushed aside for access.

We also offer our SP 11 system (soffit-mounted) and SP 12 (front-mounted) designed to cover an additional range of applications.

Technical details

- Configured in either galvanised or stainless steel
- Available in variants designed for installation both in front of or under the lintel
- Easy-to-install components, even in wide configuration
- Strips available in 300 x 3 mm and 400 x 4 mm sizes

Supplied as pre-assembled components with fixing plates, for easy self-installation to the building structure.

Example of SP 11 installation

SP 12 STRIP CURTAIN

Example of SP 12 installation

MOVABLE SYSTEM

Easy opening and closing as required

Our sliding strip curtain system is ideal for places where people and materials move back and forth, and wherever air is meant to circulate.

The curtain is designed for sensitive traffic conditions. If transport vehicles have delicate paintwork, for example, or if lighter packages need to be prevented from falling off, the strip curtain can be quickly and easily pushed to one side.

We also supply SP 13 (front-mounted) and SP 14 (soffit-mounted) versions of our system. The curtain can be divided into one or more sections and moved in different directions.

We also offer alternative multi-rail configurations for further optimisation of available space.

Technical details

- Configured in either galvanised or stainless steel
- Available in variants designed for installation both in front of or under the lintel
- Strips available in 300 x 3 mm and 400 x 4 mm sizes
- Bearing-mounted rollers and cable mechanisms ensure the smooth, trouble-free operation of all moving parts
- Alternative split-element configuration
- Designed for single or multi-rail operation
- Variable-length running rails
- Can be supplied with 90° bends
- Available with optional braking or end-stop system

SPECIAL SOLUTIONS

Unique configurations for a wide range of applications

Special orders for special requirements: Our specially designed strip curtains can be used to perform specific tasks and tackle individual challenges.

Examples of customised designs

Even wide accesses may sometimes not be fully available for the traffic they have to handle. For cases such as these, we offer a **combined fixed/sliding curtain** with elements that open and close in sections to allow access.

If the space to the right or left is insufficient to allow the curtain elements to open properly, our **90° bend section** lets them move snugly into stowage on the other side of the wall.

Examples of customised configurations

If you need to deal with an outdoor area exposed to strong winds, we offer a **robust panel material** designed to offer excellent protection against such high wind loads. If extra sound insulation is what you require, we can offer panel materials to match.

Our **dark-green strip material** is specially designed to be ideal for use in welding cabins. If the separation also needs to perform a warning function, we offer **red transparent warning strips** to provide a visual barrier.

Examples of individual installations

Our drill-free assembly variant with clamping elements allows you to attach the strip curtain to steel supports with very little effort.

What are your individual needs? Just contact us. We will be pleased to provide further advice.

ADVICE AND CUSTOMER SERVICE

Individual solutions to special requirements

Every project has its own requirements. Here at Stricker, we go into them in great detail. This is what lets us design, configure and install the right system of access for your particular situation. From off-the-shelf to fully customised. Based on long experience and the advanced expertise of our in-house engineering team. Focused on cost efficiency and energy savings, while sticking to all specifications, always with the safety and security of your employees in mind.

Stricker equals the best-possible solution, total expertise and absolute reliability. Please call or contact us by e-mail. We will be pleased to supply you with further details of our high-quality products and services.

You can also find further details of our products and access systems at www.stricker.ms/en

OUR SERVICES

Design and development

Technical health-and-safety assessment and advice

Energy analysis

Onsite technical advice

Maintenance and servicing

Total customer care from our in-house and field service teams
