STRICKER DOOR SYSTEMS

The right approach to every opening

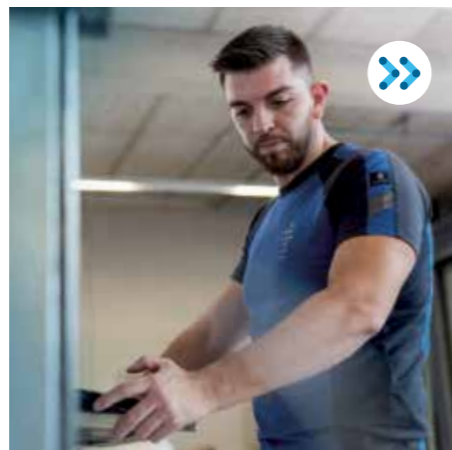

We have been specialised for over sixty years in the manufacture of, among other items, door and door systems designed for use in the food industry, the retail grocery sector and on the railways. We work with general contractors, architects, plant and construction managers and shopfitting specialists from all over Germany on wide-ranging projects of various types.

Based in the German town of Münster, we are one of the country's famous Mittelstand (medium-sized) companies. We employ some 130 people and manufacture top-quality products. Innovative and durable items – including swing doors, high-speed doors, air-curtain systems and residual space coverings – are manufactured in our ultra-modern 3,200 square-metre production facility. We are of course ISO 9001 certified, as well as pre-qualified as service provider and supplier for public-sector clients (German certificate no. 05 156 681878) and always up to date regarding compliance with applicable directives, regulations and standards.

We carefully select the raw materials for our door systems, while employing, for example, only the very latest environment-friendly production processes for our metal components. We take all this into account when designing and developing new door, gate and door systems. Surface coatings and finishes are also based on ecological, cost-effective processes. Our professional staff, trained in both the industrial and craft sectors, turn out products of the very highest quality, and we can also count on a comprehensive network of trained fitters and servicing teams; all on-call for onsite support at short notice.

SYSTEMS

Top-end solutions for the food industry and retail grocery sector

FACTS AND FIGURES

STRICKER: 130 employees at the Münster site

Specialism: door, gate and door systems

Sectors: food industry, retail grocery sector, rail transport

STRICKER SWING DOOR HYGIENIC

Our **swing door hygienic** offers a high-quality, yet cost-effective, solution for door openings of up to 3,000 mm in height.

Flexible application options and high load capacity make **STRICKER swing doors** the ideal solution for grocery retailers, food production and processing facilities, logistics companies

and large-scale catering operations. They are ideal for separating retail areas from warehouses, and for dividing different temperature-controlled zones in such places as storage facilities and cold stores, as well as on production sites.

- 1 Basic variant
- 2 "Bull's eye" design, without elastomer gasket to main closing edge, with rounded closing edge
- 3 Impact protection and 3 x swing door hinge for extra stability
- 4 Swing door with surrounding frame frame and impact protection
- 5 Wood-effect finish on one side

THE ADVANTAGES

- » Highly resistant to fats, acids, solvents and cleaning products
- » Sealed surface finish prevents the penetration of bacteria, water and cleaning agents
- » Highly resistant to cold (down to -30°C)
- » High breaking strength and impact load resistance
- » Stainless-steel components
- » Attractive visual design
- » Excellent cleaning properties
- » Highly durable and easy to maintain
- » Easy replacement of spare parts
- » High load capacity
- » Safe to use; without any hollows, angles, sharp edges or exposed screws
- » Meets the safety requirements of the German ASR A1.7 workplace directive for doors and gates

» POLYETHYLENE

(PE500) is compatible with food products and physiologically safe. It complies with FDA regulatory requirements.

AREAS OF USE

- » Grocery retailers
- » Food production facilities
- » Warehouses and cold stores
- » Logistics companies
- » Restaurants and large-scale catering

» We also offer a standard two-leaf version of the single-section STRICKER swing door *hygienic*. This is likewise available in asymmetric variants.

BASIC VARIANT

Fast delivery

Thanks to our efficient, optimised delivery processes, we can manufacture and ship your swing door in just a few days. **Our swing doors are available in the following standard sizes:**

- » single-leaf: up to 1,300 mm x 2,600 mm (W x H);
- » two-leaf: up to 2,600 mm x 2,600 mm (W x H)

Special sizes of up to a maximum of 3,000 mm are also available. Please contact us for further details.

Solid and hygienic

We fit the door case of STRICKER swing doors with a U-shaped steel profile to provide extra durability and robustness. This significantly increases their stability.

Extra features: The door frame consists of a double-shell stainless steel profile, for absolute protection against dust and dirt. The high-quality design eliminates gaps and exposed screws, making our swing doors ideal for such places as food processing facilities.

Closing edges with finger protection

Thanks to their **elastomer gaskets**, our swing doors meet the highest safety standards. A black **secondary closing edge** of simple design, **with finger protection**, helps prevent shop users, whether adults or children, from pinching their fingers in door closures in the sales area.

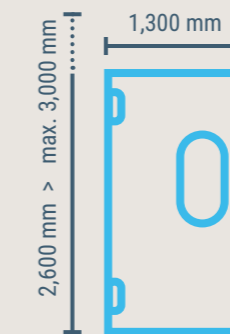

Elastomer gaskets of this type are also fitted to the main closing edge. They are robust, and yet easily replaceable and visually appealing, thanks to their dovetail guide. At the same time, the secondary closing edge of the door leaf.

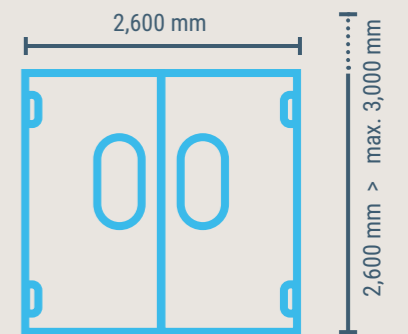

DIMENSIONS

Our swing doors are available in the following standard sizes:

SINGLE-LEAF

TWO-LEAF

CONFIGURATIONS

Viewing window

The viewing windows of our swing doors are oval and frameless in their basic configuration. The viewing aperture is approximately 330 mm wide and 550 mm high. The distance from the bottom edge of the door to the bottom edge of the window is approx. 1,200 mm. Differently-shaped, customised viewing windows are also available to order. Is there a need for greater transparency? Then our Duo variant is the right choice for you. In this case, the entire upper section of the swing door is made of transparent hard plastic to let you see what is happening behind it.

Colours

The door leaf of the **STRICKER swing door *hygienic*** is available in its **basic version** in the following colours:

- » Anthracite grey (based on RAL 7016)
- » White (based on RAL 9003)
- » Blue (based on RAL 5017)

We can also manufacture our swing doors to individual order in all other RAL-based colours.

Material

The leaves of our swing doors are made of recyclable polyethylene (PE500), a high-quality plastic that is both physiologically safe and compatible with food products. The composition of this material meets the requirements of FDA regulations. It can also withstand cold (down to -30°C), and is resistant to fats, acids, solvents and cleaning products.

Polyethylene is likewise durable, highly resilient, rust-free and able to retain its shape, so we also use it for the **wall strips** that form part of our range.

Swing door hinge

Our swinging closure system allows for a 2 x 90° opening angle with integrated 90° retention in either direction. If this opening angle is not sufficient, we also offer a 2 x 180° opening angle without 90° retention. However, and depending on the structural situation, an external retaining device can also be fitted. Please contact us for further details.

Customised swing doors

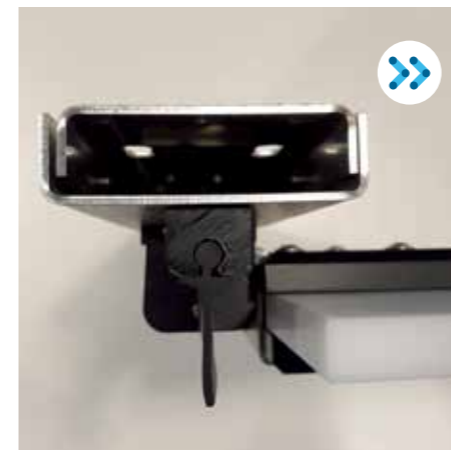

In addition to our basic designs, we also make swing doors that are tailored to your needs. Our experts will be happy to advise you on which variant achieves optimum results for you. **Optional custom features:**

- » Impact and crash protection for the door leaf
- » Viewing windows in different shapes and sizes
- » Special dimensions and colours on request
- » Main closing edges with continuous gasket
- » Stainless-steel swing door hinge (PBVA) without 90° retention / with 180° opening angle
- » Surrounding frame (consisting of three parts), easy to install
- » Individual solutions for your building's doorways
- » Fixed sections above or next to the swing door
- » Pipe-conduit channels

Just call us! Our experts will be pleased to advise you, and will work with you to find the right door system for your building's requirements.

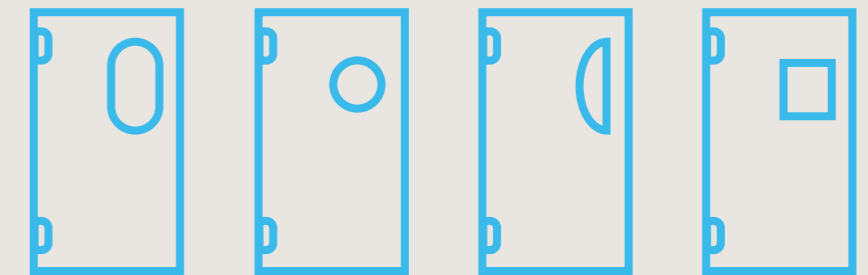

» VIEWING WINDOWS

The basic version of our swing door is supplied with oval, frameless viewing windows. But other configurations are also available:

» COLOURS

The basic version of our swing door *hygienic* is available in the following RAL-based colours:

OVAL:
sealed or pressed in

CIRCULAR:
sealed or pressed in

SEMI-CIRCULAR:
pressed in

RECTANGULAR:
pressed in

DUO:
transparent top

WITHOUT WINDOW:
fully transparent,
patterned or coloured

* The viewing window of the basic version is always positioned at a distance of 150 mm from the main closing edge, as this provides an optimal field of vision when passing through the door.

EVERYTHING UNDER ONE ROOF

We supply door and gate systems according to your requirements and wishes. Our professional team is also at your disposal with onsite technical advice, from planning stage right up to final installation.

Do you have special requirements? We develop special designs and individual solutions. You can also rely on our expertise in safety and energy assessments, economic analysis and work planning. Support is provided by

our large after-sales, maintenance, servicing and installation staff; on call 24 hours a day, 365 days a year.

Whatever fits: other alternative door systems

» HIGH-SPEED DOOR

If the opening is large and the door needs to run quickly and automatically, **STRICKER high-speed doors** offer functional reliability, even with very high-frequency open/shut operation. Whether you require door openings in food processing facilities or customer access to retail grocery premises, we know your needs! Special opening variants and protection mechanisms also ensure safe and convenient operation. When it comes to selecting our raw materials, we rely on high-quality sources. Individual curtain configurations offer creative freedom for your visual design.

» STRIP CURTAIN

If the building design rules out doors and gates, strip curtains can be used to close both narrow and extremely large wall openings. Whether pre-assembled or supplied for self-assembly, **STRICKER strip curtains** are characterised by their excellent cost-to-performance ratio and outstanding insulating properties. They are suitable for use in cold rooms and freezers, for separating different production areas and for weather protection. They let you protect your employees from draughts, dust, flying fragments, liquid splashes and noise.
